Bug Banisher

Banish bugs. Keep the humans in charge.

An AI-for-open-source tool that finds bugs on GitHub and fixes them, with your approval.

Team 404 : Boys Not Found

The problem: small bugs pile up

Maintainers

Drowning in small, boring bugs that still matter.

Beginners

Want to help, but don't know where to start.

BugBanisher sits in the middle: it finds a real bug, explains it, and lets a human decide.

What it does

FIND

Scans one of your repos for real bugs.

EXPLAIN

Says why it is abug and why itmatters, in plain English.

FIX

Drafts the smallest possible patch and checks it.

Then a human clicks Approve and a pull request opens. Nothing is ever merged automatically.

How it works: 5 steps

1

Connect

Git Hub token with minimal permissions

2

Pick

Choose one repo that you own

3

Scan

Rules,syntax checks and a local AI review

4

Fix

Smallest patch, verified, shown as a diff

5

Approve

Youclick. Abranch and PR open.

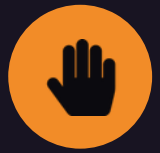

Every pull request carries an AI-assistance note, so reviewers always know.

Why you can trust it

Dry-run is ON by default

Rehearse everything.Nothing is written until you switch it off.

Only 3 PRs per session

A hard cap that cannot be changed in settings.

Never auto-merges

No merge code exists.It never touches the default branch.

Your repos, your token

Only repos you own.The token stays in memory, never on disk.

Checked before you ever see it

- The patch applies cleanly
- The file still parses (valid code)
- The flagged bug is really gone
- No new serious issue is added

Models can be wrong

We prove a patch applies and parses, not that it is perfect. That is why a human always approves.

Open-weight AI, simple stack

THE AI

- Gemma or Llama through Ollama
- Runs locally on your laptop
- No hosted-model API keys
- Works offline: no model means rules only

THE CODE

- React + TypeScript (web app)
- Node.js + TypeScript (server)
- About 25 built-in bug rules
- Real syntax checks and 34 tests

Built with Arena AI Agent Mode, then reviewed by humans.

Banish bugs.
Keep the humans in charge.
